Disclaimer

The sole purpose of the AI generated analysis of the source code is to find the possible issues or better ways to write the code. As it is still the beta version and needs to accumulate more data for further perfection, the recommendations provided may need to be revised as per need. Hence, the following points are mentioned for the source code developer's acknowledgement to make it an overall better experience:

AI analyzes each function of the source code individually. It is advised to take the proposed changes as an improved way of writing that particular function; the source code may need a bit of revision for the perfect coherence between the suggested amendments of specific function with the rest of the smart contract.

AI could include external modifiers from OpenZeppelin or other sources that may require additional libraries or contracts to be added in the original source code.

AI could use variables or functions that may not be part of original source code and developers are required to complete the prerequisites of the suggested changes.
